

Species

Maple

Source

Original factory and mill floors which are carefully salvaged to preserve the original tongue and grooves

Flooring Type

Solid Wood, As-Is (Reclaimed/Salvaged)

Profile

Tongue and Groove (T&G)

Original Milling

Trestlewood will sort and trim the material to preserve the original T&G. Tongues or grooves which are entirely broken off will be sorted out. Tongues which are partially broken off are acceptable. Broken bottom legs of the groove are acceptable.

Knots

Maple Factory Flooring is not sorted for knot content, but in our experience, there are very limited knots.

Holes

Unlimited nail holes and other character marks on the face of the floor. Essentially no bolt holes.

Checking/Cracks

Surface checking is allowed; some cracking is allowed as long as board is sound. There are relatively frequent cracked tongues and grooves which need to be installed with care.

Grain Pattern

Mixed

Standard Dimensions

a) Thickness (net): 1"; b) Width: Random, primarily 2" to 4"; most common width is 2.25"; other widths are sometimes available; and c) Length: 1' to 8'.

Textures Available

As-Is, Skip-Planed or Smooth

Skip-Planed Texture

Skip-Planed Texture is achieved by using the texture of weathered face and lightly planing that as-is face. The look of the skip-planed material will vary substantially from piece to piece. Some of the characteristics that will vary substantially from piece to piece are: original finish; original texture; and color. Some pieces (roughly 50% of the square footage) may "clean up" entirely and have no skipping.

Because the finish face of Skip-Planed flooring is not entirely milled, there will often be a slight "lip" along the seams where two floor boards come together upon installation. Attention to slight differences from piece to piece may minimize the impact of these differences, but will not eliminate it as an issue entirely.

Appearance Variation

Boards can vary in appearance from piece to piece and even within a piece. The characteristics described on this specification sheet generally apply to each board's featured face. The opposite face and edges can differ from the featured face in texture, coloring, and other characteristics unless otherwise noted.
